

Flow Measurement

SITRANS FX

SITRANS FX300

Overview

SITRANS FX vortex flowmeters provide accurate volumetric and mass flow measurement of steam, gases and liquids as an all-in-one solution with integrated temperature and pressure compensation.

Benefits

- 2-wire technology with HART communication
- Integrated temperature compensation for saturated steam as standard feature
- Integrated temperature and pressure compensation enabling direct measurement of mass, standard volume flow rate and energy
- One instrument for measuring pressure, temperature and flow. No additional installation of pressure and temperature sensors
- Maximum process reliability thanks to Intelligent Signal Processing (ISP) - stable readings, free of external disturbances
- Fully welded stainless steel construction with high corrosion, pressure and temperature resistance
- Maintenance-free design
- Ready to use due to plug & play feature
- Minimal pressure drop
- Compact or remote design
- Free Air Delivery (FAD) measurement of a compressor

Application

The SITRANS FX300 is a flowmeter in a single or dual transmitter version, suitable for measuring industrial steam, gases, as well as conductive and non-conductive liquids, e.g. steam (saturated steam, superheated steam), industrial gases (compressed air, nitrogen, liquefied gases, flue gases), and conductive and non-conductive liquids (demineralized water, boiler feed water, solvents, heat transfer oil).

The main applications of SITRANS FX300 can be found in the following sectors:

- Chemical
- Petrochemical
- Oil & Gas
- Power plants
 - Air
 - Heating
 - Cooling
 - Chilling
- Food & beverage
 - Pharmaceutical
 - Sugar refineries
 - Dairies
 - Breweries
 - Production of soft drinks
- Pulp & paper
- Water & waste water

System Overview

Version	Flange	Sandwich	Dual transmitter
Compact			
Remote			

Design

SITRANS FX300 vortex flowmeters are available in the following variants:

SITRANS FX300 Single transmitter

The single transmitter variant exists in flange or sandwich design. In flange design the SITRANS FX300 offers a sensor with integrated nominal diameter reduction up to two nominal diameter sizes. That ensures best results in accuracy and optimal measuring ranges even in pipelines with large diameters, designed for low pressure loss. By forgoing complex pipeline reduction installations, space and cost saving installations can be realized. At the same time the number of potential leakages is reduced to a minimum.

The flowmeters in sandwich design will be supplied with additional optimised centring rings. With installation of the centring rings the SITRANS FX300 can be aligned centrally and eliminates any offset between the sensor and the pipeline.

The SITRANS FX300 is also available as a remote version. This feature allows separating the transmitter from the sensor up to a distance of 15m (49 ft). The remote mounted transmitter allows easy operation and optimal readability.

The following configurations can be selected for the single transmitter variant:

- **Basic version**
Suitable for liquids and gases, integrated temperature compensation included as standard for saturated steam
- **With integrated pressure compensation**
Version with integrated temperature and pressure compensation for gases, wet gases, gas mixtures or steam (energy measurement optional)
- **With integrated pressure compensation and isolation valve**
Allowing the pressure sensor to be shut off for the purpose of pressure and leak testing of the pipeline or for being exchanged without interrupting the process.
- **Remote version**
With this version transmitter and sensor are locally separated. In addition, it offers the same features as the compact version (integrated temperature and pressure compensation, isolation valve).

SITRANS FX300 Dual transmitter

This is a genuine redundant system with two independent sensors and transmitters providing twofold functional reliability and availability of the measurement. This variant is optimally suited for measurements in multi-product pipelines.

The dual transmitter version is available as:

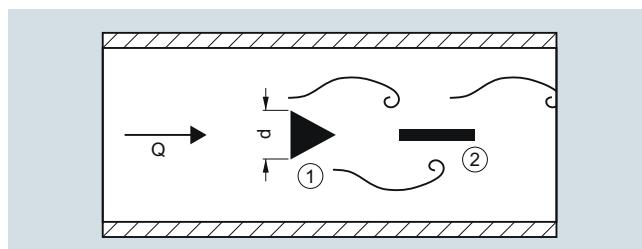

- **Basic version**
Suitable for liquids and gases, temperature compensation integrated as standard for saturated steam

Function

Operating Principle

SITRANS F X vortex flowmeters measure flow rate by detecting the frequency at which alternating vortices are shed from a bluff body inserted into the flow stream. This principle of measurement is derived from the Karman phenomenon of vortex shedding. The frequency of the alternating vortices is proportional to the flow rate.

The passage of a vortex causes a slight stress on a pick-up sensor placed downstream of the bluff body. The stress is detected by piezo-electric crystals placed inside the pick-up sensor.

① = Bluff Body, ② = Pick-up

The flowmeter calculates the flow velocity using the following equation:

$$Q = A \cdot V = A \cdot d / St \cdot f = 101.93 \cdot f / K \text{ [m}^3/\text{h]}$$

Where:

Q = flow rate [m^3/h]

f = vortex shedding frequency [Hz]

K = calibration constant [pulses/ m^3]

d = width of the bluff body [m]

St = Strouhal Number

A = cross-section area [m^2]

V = flow velocity [m/s]

Requirements

In order to generate the vortex streets, the medium must have a minimum velocity:

- For steam and gases, the flow velocity must be 2 to 80 m/s (6.6 to 262 ft/s)
- For liquids the flow velocity must be 0.4 to 10 m/s (1.3 to 32.8 ft/s)

Technical specifications

Input	
Measuring range limits	See „Dimensional Drawings“
Media pressure	1 ... 100 bar (14.5 ... 1450 psi) (Higher pressures on request)
Output	
Current output	4 ... 20 mA
• Measuring range	20.8 mA ± 1 % (105 % ± 1 %)
• Over range	
• Load	100 Ω $R_{\max} = (U_{\text{Power Supply}} - 14 \text{ V})/22 \text{ mA}$
- min.	NAMUR NE 43
- max.	22 mA (112.5 %)
• Error signal	4 mA
• Maximum output	HART
• Multidrop mode	FSK
Digital output	Transmitter
• Communication	
• Physical layer	
• Device category	
Pulse output	
Passive pulse output, setting pulse value (meter factor) for totalized flow or heat quantity (energy) with option Y47 (e.g.: 1 pulse/kg or 1 pulse/kWh)	
• Pulse frequency	Max. 0.5 Hz
• Power supply	Min. 24 V DC as NAMUR or
• Non-Ex version	open < 1 mA, max. 36 V, closed 100 mA, $U < 2 \text{ V}$
• Ex version	open < 1 mA, max. 30 V, closed 100 mA, $U < 2 \text{ V}$
Accuracy	
Standard version	
• For liquids	± 0.75 %
- $Re \geq 20,000$	
• For steam and gases	± 1 %
- $Re \geq 20,000$	
• For steam, gases and liquids	± 2 %
- $10,000 < Re < 20,000$	
Pressure and temperature-compensated version	
• For liquids	± 2 %
- $10,000 < Re < 20,000$	
- $Re \geq 20,000$	± 0.75 %
• For gases and steam	± 2.5 %
- $10,000 < Re < 20,000$	
- $Re \geq 20,000$	± 1.5 %
Repeatability	± 0.1 %
Installation conditions	
(At different conditions, e.g. installation after control valve, bends or reductions, please refer to the operating instructions.)	
• Inlet run	≥ 20 x DN
• Outlet run	≥ 5 x DN

Flow Measurement

SITRANS FX

SITRANS FX300

Software		Design
Uncompensated for liquids and gases, density-compensated by temperature for saturated steam	Order option 1	Material • Sensor/Pick-up AISI 316L (1.4404)/ AISI 316L (1.4435)
Density-compensated by temperature and pressure for superheated steam	Order option 4	Hastelloy C22/2.4602 available on request (contact your local Siemens representative)
Gross heat meter		Aluminum
When the thermal energy of steam is to be measured	Order option 5	AISI 316L (1.4435) / FPM or FFKM
Following information is required at option Y51 to Y56	<ul style="list-style-type: none"> • Y51 Variable current output: Flow rate, power • Y52 Power unit Select one of the following units: kJ/h, MJ/h, GJ/h, Btu/h, kcal/h, kW, MW or special (custom) • Y53 Fullscale value power • Y54 Variable pulse output: Totalized flow, energy • Y55 Totalizer on/off • Y56 Energy unit Select one of the following units: kJ, MJ, GJ, Btu th, kcal, kWh, MWh or special (custom). 	FPM (Viton) for steam and non-aggressive gases. FFKM (Kalrez) for chlorine and other aggressive gases. (The meter is fitted with FPM/FFKM gasket only when configured with pressure sensor)
Density compensated by temperature and pressure for gases, wet gases	Order option 7	Process connections Flange norm EN 1092-1 form B1/B2 or ANSI B16.5 RF.
Wet gases	Select Y49 and enter relative humidity of process medium in %	Other flanges on request (contact your local Siemens representative) DN 15 ... 300 (½ ... 12") DN 15 ... 100 (½ ... 4")
FAD - Free Air Delivery		Degree of protection IP66/IP67
When the delivered air of a compressor is to be measured	Order option 8	Dimensions and weights See "Dimensional Drawings"
In Y81 to Y87 add information regarding:	<ul style="list-style-type: none"> • Y81 Inlet suction temperature • Y82 Atmospheric pressure • Y83 Pressure drop at inlet suction filter • Y84 Inlet relative humidity • Y85 Actual compressor rotation (rpm) • Y86 Rated compressor rotation (rpm) • Y87 Relative humidity at compressor output 	Display and operating interface Local display Languages German, English, French
Mixed gases	When fluid is a gas mixture, specify the single gas components and their amount/concentration in %.	Power supply • Standard version 14 ... 36 V DC • Ex version 14 ... 30 V DC
Rated operation conditions		Certificates and approvals Explosion protection • ATEX II 2G EEx d ia [ia] IIC T6 • FM US/C Class I, II, III, Div. 1 and 2
Ambient temperature		Calibration All flowmeters will be delivered with a 3 point calibration certificate
• Non-Ex version	-40 ... +85 °C (-40 ... +185 °F)	Material Certificate Certificate of compliance, pressure test, material certificate, material in acc. of NACE and PMI of pressure bearing metal parts.
• Ex version	-40 ... +65 °C (-40 ... +149 °F)	
Storage temperature	-50 ... +85 °C (-58 ... +185 °F)	
Media temperature	-40 ... +240 °C (-40 ... +464 °F)	
Density	Taken into consideration when dimensioning	Cleaning Choose Cleaning Class1 when fluid is oxygen or contains chloride.
Viscosity	<10 cP	
Reynolds number	10 000 ... 2 300 000	Certificates X-ray and dye penetration test on pressure bearing weldings
Media pressure limit	Max. 100 bar (1450 psi) Higher pressure on request (contact your local Siemens representative)	

Valid combinations of sensor/connections size with flange norm/nominal pressure are shown in the following table.
